

JIL SOVEREIGN

Walk Into Any Audit Already Proven

Provider defense and revenue integrity with contemporaneous, sealed evidence
— not a scramble after the letter.

For health systems · CFOs · Compliance · Revenue Integrity · General Counsel
Audit Readiness Console (AREB) · Demo console briefing

THE INSTITUTIONAL JOB

Providers need proof before the audit — and dollars that were earned.

DEFEND

Audit readiness

Every material claim should be attestable: coding, medical necessity, eligibility, face-to-face, level of care.

RECAPTURE

Revenue integrity

Earned-but-unbilled and under-coded revenue within timely-filing windows — with a no-upcoding guardrail.

LITIGATE

FCA / qui tam posture

Exposure quantified across scheme families and packaged for filing counsel before a relator forces the question.

HOW IT WORKS

From clinical / billing truth to sealed AREB

1

Connect data planes

Claims, EVV, clinical docs — client-resident or BYO warehouse. PHI minimized; member tokenization at ingest where required.

2

Deterministic checks

Visit Truth, LOC/SIA, LUPA/case-mix, Exposure Radar by clinician, Revenue Radar with no-upcoding guardrail.

3

Prove compliance

Compliant episodes attested with contemporaneous evidence; exceptions surface with quant dollars.

4

Seal for counsel

AREB for provider defense; CREB® when legal framing is required — same hybrid PQ seal suite.

WHY THIS MATTERS NOW

Because “we’ll pull charts if they ask” is not a strategy.

Audit velocity

Plans and contractors move faster than chart rooms. Pre-attested evidence shortens the fight.

FCA climate

Relators and DOJ reward contemporaneous documentation. Sealed records are designed for that world.

Revenue left on table

Under-coding and missed SIA/LOC are real dollars — captured without upcoding fiction.

Board & bond markets

Integrity narrative needs measurable control, not slideware.

WHAT MAKES JIL DIFFERENT

Not another dashboard. Sealed, attributable evidence.

Defense-first product

AREB is built for providers — dual face with payer PIEB never mixed on one engagement.

Sealed, not screenshotted

Hybrid PQ seals + independent timestamps on the evidence you hand counsel.

Revenue with guardrails

Revenue Radar recaptures earned dollars with mandatory no-upcoding policy.

Post-acute depth

Home health & hospice eligibility, F2F, certification, LOC — not only acute DRG theater.

Demo is operational

customer.jilsovereign.com/demo-HOSP is a working console on real engagement findings.

Court-grade seals — not screenshots

Ed25519 + ML-DSA-65

Hybrid classical + post-quantum signatures on every sealed artifact

Hash-chained ledger

Tamper-evident sequence; verify fails closed on mutation

RFC3161 + OpenTimestamps

Independent time anchors (TSA + Bitcoin where enabled)

CREB® / RREB™ / AREB / PIEB

Same evidence engine; framing for SIU, AP, defense, or recovery

WHAT YOU SEE IN THE DEMO

Meridian Health System · Audit Readiness Console (demo tenant)

Acute Care · Revenue Integrity (AREB)

Earned-but-unbilled / under-coded recapture within timely filing.

Enterprise Internal Audit (AREB)

Coding, necessity, referral rules attested; exceptions only.

FCA / Qui Tam (CREB)

Exposure quantified and packaged for defense counsel.

Home Health & Hospice

Post-acute compliance on eligibility, F2F, certification, LOC.

VS. STATUS QUO

What institutions usually buy — and what JIL changes

Capability	Typical tools	JIL
Primary artifact	Workplan / checklist	Sealed AREB / CREB
When proof exists	After request	Before the letter
Revenue tools	Often upcoding risk	No-upcoding guardrail
Payer vs provider	Shared BI soup	Hard allegiance firewall
Tamper story	Trust IT	Independent verify

Institutional trust starts with honest product language.

Does JIL practice medicine or give legal advice?

No. JIL produces attributable evidence and operational packages. Clinicians and counsel own professional judgment.

Is this the same product as the payer console?

Same seal engine; opposite allegiance. Provider engagements cannot open payer recovery routes.

What about PHI?

Design prefers tokenization and least-privilege data planes. Production requires appropriate BAA / contracting.

NEXT STEP

Open the Audit Readiness Console

Tour findings, open an evidence path, and see how sealed artifacts are generated. Share this deck with compliance, RI, and GC.
